

# **Abstract**

## **Title:**

Evaluate of individual and groups abilities in a football game.

## **Objectives:**

Determine the level of playing skills of players of the Czech and Spanish teams in terms of older products based on video games and of course the video draw results.

## **Methods:**

For this work I used the observational method is based on observation, namely the method of indirect observation. From the observation results and draw converts them via text and graphs in your Bachelor thesis.

## **Results:**

In the assessment of individual gaming activities in terms of games I have concluded that between Czech and foreign team are significant differences not only in gaming activities in the adult soccer, but they are apparent already in the youth categories. Perhaps the biggest differences between the earlier of SK Slavia Praha and Espanyol Barcelona in passes I noticed, in personal combat, while the overall movement in the field.
